NEWSLETTER MARCH-APRIL 2008

XEOS Now Offering Elevation Capture

Starting last fall, XEOS Imaging is proud to offer its clients pre-oriented stereophotogrammetric models.

The models are created from original XEOS images, without the need for any additional data. As such, they allow our clients to capture elevation (z) and perform mapping on screen using standard photogrammetric softwares like DVP (V6.4 or more recent) and PurVIEW.

The models are pre-oriented, which saves users from having to aerotriangulate the images themselves. This product simplifies their work and is very useful in different sectors such as pipelines, forests, mines, electric transmission lines and more.

For more information on XEOS Imaging and its products, contact us at the number indicated at the bottom of this newsletter or visit our Web site at www.xeosimaging.com

Did you know ?

XEOS would like to remind you that we automatically archive all of your data (images, orthomosaics, stereoscopic pairs and LIDAR data) as protection in the event this information is lost.

In fact, XEOS has a failsafe archiving system that will protect your data from all eventualities.

XEOS Know-how

Did you know that XEOS orthomosaics can offer precision within less than a meter without control points on the ground?

Do not hesitate to contact us for more information.
