

The Power of XEOS's IT Infrastructure

To meet the ever-growing needs of its customers throughout North America, XEOS Imaging has equipped itself with a reliable, high-performance and scalable computer infrastructure. The main benefits are:

Your project deadlines are guaranteed to be met:

- Implemented specifically to process a large volume of images:
 - Computer network with 10 Gb/s of throughput;
 - Computer servers with several Terabytes of disk space;
- Scalable online processing capacity (no license restrictions).

Unfailing protection of your data:

- Redundant archiving system with several Terabytes of disk space synchronized in two separate buildings;
- Data backup system that creates a copy of the data on a daily basis.

Accessible, fast and secure:

- FTP servers;
- Dedicated 10 Mb/s fibre optic link;
- Secure environment (restricted and controlled access, biometric sensors and surveillance camera).

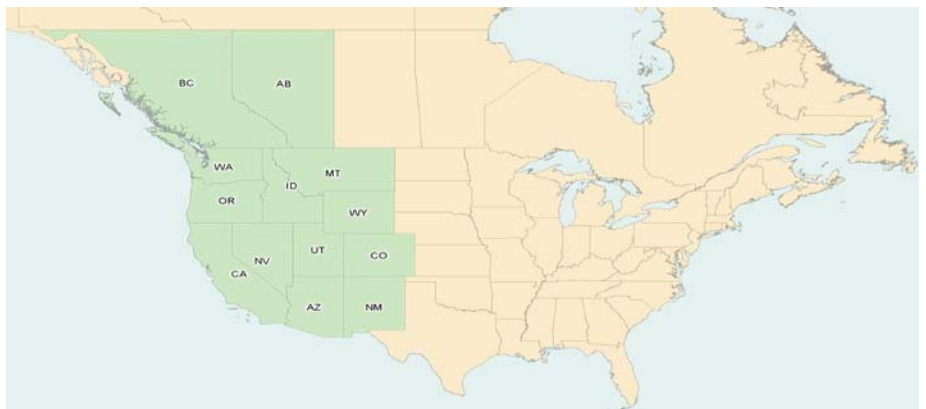

Projects in the West Coast and the Rockies?

XEOS Imaging is presently working in the **West Coast** and **the Rockies**, for a good part of the summer.

Do you have any projects in that area?

Contact us to take advantage of our presence.
